Build A Nest

At this time of year most bird species are building their nests to lay their eggs and rear their young chicks. Nests can come in all different shapes and sizes. Most birds build their own from natural materials and build them in hidden corners away from predators.

Gather suitable natural materials from your garden or local park. Good material would be things like small twigs, dry grass or stems, moss, lichen and feathers.

Have a go at building a nest.

Top tips

- *Start by making a circle or square of sticks*
- *Build up the sticks like a wall*
- *Put hard things on the outside and soft things on the inside*
